

During this project, I developed analytical and data processing skills related to customer behavior analysis. I worked with Excel to organize datasets, create tables, and charts. I calculated key performance metrics such as AOF, AOV, and average margin. I also applied cohort analysis and decile segmentation techniques to find how different groups of customers behave in business processes. Furthermore, I improved my ability to interpret numerical results and explain trends. Overall, I improved my Excel, data analysis, and technical skills.
